About Me

Hey I’m Abhishek a Web front-end **developer** who is passionate for creating innovative and user-friendly websites. I lives Delhi India. I have good skills in frontend tools And Have goal to learn new thing in tech.
In my free time I spend with family and friends otherwise I try get to know new things.

Skills

- SKILLS : HTML CSS SASS JAVASCRIPT
- FRAMEWORK : BOOTSTRAP REACT
- LIBRARY : JQUERY
- EXTRA : GITHUB MEDIA QUERIES (RESPONSIVE)

Project

- **WEATHER-WEBSITE**
It’s a weather forecasting website that will take a location and gives details of weather of location. To create this I used to HTML CSS SASS JAVASCRIPT and weathermap.org API.
<https://aks-weather-site.netlify.app/>
- **NETFLIX-CLONE**
It’s an clone of Netflix front page to made this I used html to create a structure
And CSS to style it and made it to look like a Netflix.
<https://aks-netflix-clone.netlify.app/>
- **React-QUIZ-WEBISTE**
It’s website that have quiz game website contain some question you have option of answer and select the answer after completing the question you will get the score how much of question correct and how many are wrong I used **React** build this
<https://aks-react-quiz.netlify.app/>
- **AMAZON-CLONE**
It’s an amazon front page clone I made this clone used
Html CSS and JavaScript
<https://aks-amazon-clone.netlify.app/>
- **REACT-FURNITURE-WEBSITE**
It’s a react based furniture website that I have created using react **MUI** library and CSS. I also used react hooks concept like usestate and useeffect you can see a website throughout the link mention below
<https://aks-react-furni-website.netlify.app/>
- **DIGITAL-CLOCK**
It’s an digital clock that shows a current time of the world
To made this I used HTML CSS JAVASCRIPT
<https://aks-digital-clock.netlify.app/>
- **TODO-LIST**
A to-do list, often abbreviated as "To-do list," is a simple yet powerful organizational tool used to manage tasks, activities, and responsibilities. Essentially, it's a list of items or actions that an individual needs to complete or accomplish within a certain timeframe
<https://aks-todo-list.netlify.app/>
- **HIGH-TECH-WEBSITE**
Its company website High-tech its dynamic website that will content different section home about contact and many more to make this website is used some Tools like Html SASS BOOSTRAP JQUERY.
<https://aks-hightech-website.netlify.app/>
- **BOOTSTRAP-CARDS**
Its different cards in bootstrap to use in different uses like in testimonial profile shopping this cards are responsive I only used core Bootstrap do make this
<https://aks-bootstrap-cards.netlify.app/>
- **REACT-EXPENSES-TRACKER**
React expenses tracker in this you have a two input fields in which you can add the item name and its value and it will show the time and date in which you add this you can do total of the prices. To make this I used React
<https://aks-react-expenses-tracker.netlify.app/>
